concrete slump extending polycarboxylate superplasticizer

concrete slump extending polycarboxylate superplasticizer can be applied to projects which requires long construction time in premixing, keeping liquidity, high temperature slump retention and medium-low slump retention in concrete. This type can reduce the great loss of concrete caused by high mud concrete content, long transportation distance, high temperature and high adsorption capacity of cementing material. concrete slump extending polycarboxylate superplasticizer can be utilized alone if it meets requirements of water reducing rate. If not, Slump retention type using can be compounded with other Polycarboxylate Superplasticizer, such as high performance water reducing type, to increase the rate of water reducing.

- Homogeneity Index

| Items | Enterprise Standard |
|--------------------|--|
| Appearance (23° C) | Colourless to light yellow, viscous liquid |

| | |
|--------------------------|-------------------------------|
| PH Value (23° C) | 6.5 ± 1 |
| Solid content (%) | 40 ± 0.5 and 50 ± 0.5 |
| Content of Chloride (%) | ≤ 0.10 |
| Water Reducing Ratio (%) | ≥ 28 |

Function of concrete slump extending polycarboxylate superplasticizer

(1) Admixture for adjusting the variable performance of concrete mixing and logistics. It includes common water reducing agent and water reducing agent, air entrainer and pumping agent, etc.

(2) Admixture for adjusting concrete setting time and hardening performance. Including retarder, early strength agent and accelerator.

(3) Admixtures for regulating concrete durability. Including air entrainer, waterproofing agent and rust inhibitor, etc.

(4) Admixtures for adjusting other properties of concrete. Including expansion agent, antifreeze agent, colorant and so on.
